DETAILED ACTION

1. This Office Action is in response to the Amendment and the Terminal Disclaimer, both being filed 01/13/2009. In view of the Terminal Disclaimer, the rejection of claim 1 on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 7,151,071 B2 is withdrawn. In view of the Amendment, claim 4 was cancelled and claims 1-3 and 5-6 are now pending.

Allowable Subject Matter

2. Claims 1-3 and 5-6 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Yang et al. (US 6,034,025).

Summary of Claim 1:

A preparation method for a solid titanium catalyst for olefin polymerization, which comprises the steps of:	
1	preparing a magnesium compound solution by dissolving a magnesium halide compound into a mixed solvent of a cyclic ether and one or more of alcohol;
2	preparing a carrier by <u>adding firstly a titanium halide compound</u> having a general formula of

	Ti (OR) _a X _(4-a) , in which R is an alkyl group having 1-10 carbon atoms, X is a halogen atom and a is an integer of 0-3, to the magnesium compound solution at -10-30°C, wherein <u>the molar ratio of the firstly-added titanium halide compound to the mixed solvent of cyclic ether and one or more of alcohol is 1:3.0 – 1:10</u> , elevating the temperature of the resulted solution or aging it, and then thereto <u>adding secondly the titanium halide compound additionally</u> ;
3	preparing a titanium catalyst by reacting the carrier with a titanium compound and an electron donor; and
4	washing the titanium catalyst with hydrocarbon solvent at 40-200°C

Yang et al. disclose a method to prepare a solid titanium catalyst for olefin, comprising (A) producing a magnesium compound solution by dissolving a magnesium halide compound in a mixture of a cyclic ether and at least two different alcohols to form an intermediate solution and adding an organosilane compound to the intermediate solution to form the magnesium compound solution; (B) precipitating solid components by reacting the magnesium compound solution with a titanium halide compound; and (C) reacting the precipitated solid components with a titanium compound and an electron donor, wherein the molar ratio of the cyclic ether and the alcohol is between 1:0.05 to 1:0.95; the cyclic ether includes 2-methyl tetrahydrofuran (col. 3, lines 57 and 62-63; Example 1; claim 1). However, Yang et al. do not teach or fairly suggest the claimed preparation method for the solid titanium catalyst for olefin polymerization, wherein the method comprises, in particular, a step of adding firstly a titanium halide compound with the molar ratio of the firstly-added titanium halide compound to the mixed solvent of cyclic ether and one or more of alcohol being 1:3.0 – 1:10 and a step of elevating the

Art Unit: 1796

temperature of the resulted solution or aging it, and then thereto adding secondly the titanium halide compound additionally.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ling-Siu Choi whose telephone number is 571-272-1098. The examiner can normally be reached on Monday to Friday.
